

HR ATTRITION ANALYSIS REPORT

Project Focus: Workforce Retention & Risk Analysis

Prepared by: Niyasudheen AM

1. EXECUTIVE SUMMARY

Analysis of the organization's workforce data identifies a critical attrition rate of **16.09%**. While the average employee age is stable at **36.9 years** significant "flight zones" exist within early career demographics and specific salary brackets. This report translates the data from the interactive dashboard into actionable insights to improve retention.

2. CORE WORKFORCE METRICS

- **Total Headcount:** 1,473 Employees.
 - **Total Exits:** 237 Employees.
 - **Current Attrition Rate:** 16.09%.
 - **Average Age:** 36.92 Years.
-

3. KEY FINDINGS: THE "WHO" & "WHY"

A. Age Group Risk (The Gen Z Gap)

The **18–25 age group** is the most unstable, with an attrition rate of approximately **35.8%**. This is more than double the company average, suggesting that the organization struggles to integrate and retain junior talent.

B. Compensation & Performance

Attrition is heavily concentrated in the '**Upto 5k**' salary slab, showing a **22%** exit rate. High performers (Rating 3 & 4) within this bracket are identified as the primary flight risks indicating that pay scales are not meeting market expectations for top tier junior talent.

C. Gender Insights

- **Male Attrition:** 16.97%.
- **Female Attrition:** 14.77%. While males exit at a slightly higher rate, the gender split is relatively balanced compared to other risk factors like age and pay.

D. The Burnout Factor

Employees working **Overtime** have an attrition rate of **30.5%**, significantly higher than those who do not. This matches the low **Work Life Balance scores (Level 1)** visualized on the dashboard, which is a leading predictor of resignation.

4. TENURE & MANAGEMENT ANALYSIS

A. The "First Year" Crisis

The highest volume of attrition (**59 employees**) occurs at the **1 year mark** with the company. This suggests that the "Onboarding" and "First Year Experience" are the most critical times for intervention.

B. Manager Influence

Attrition spikes significantly when employees have **0 years with their current manager** (reaching a **40% rate** in some cohorts). This proves that manager transitions are high risk periods where employees are most likely to leave.

C. Promotion Stagnation

A clear correlation exists between attrition and time since the last promotion. Employees who haven't seen career movement in **over 5 years** show a steady decline in engagement and a higher likelihood of exit.

5. HIGH RISK ROLES

Based on the dashboard's cross filtering, the following roles require immediate attention:

1. **Sales Representatives:** Critical risk (40%) driven by high travel and low base pay.
 2. **Laboratory Technicians:** High risk (24%) driven by work life balance issues.
 3. **Human Resources:** Elevated risk (23%).
-

6. STRATEGIC RECOMMENDATIONS

- **Gen Z Retention Program:** Implement mentorship and clear 24 month career paths for the 18–25 age group.
 - **Salary Market Correction:** Audit the "Upto 5k" salary slab to ensure competitiveness, especially for technical roles.
 - **Burnout Mitigation:** Limit mandatory overtime in high risk departments (Sales/Lab) and introduce flexible work life balance policies.
 - **Manager Transition Support:** Introduce "Stay Interviews" and extra support for teams undergoing a change in leadership.
